

PAWGUARD

USER OPERATIONS MANUAL

Step-by-Step Role Guide for Adoption Officers

PawGuard Dog Rescue, Shelter Operations & Adoption Management Web Application

Document Control	Details
Document Reference	PRR-PAWGUARD-2026-V1
Manual Type	User Operations Manual – Role Guide
Role Covered	Adoption Officer / Adoption Coordinator
Source of Requirements	PawGuard Project Requirement Report
PRR Issue Date	July 27, 2026
Primary Scope	Adoption Module, Applicant Verification, Follow-up Logs
Status	Controlled Operational Guide

1. Purpose and Scope

This manual provides step-by-step operational guidance for the PawGuard adoption workflow. The PRR defines the Adoption Coordinator's responsibilities as application processing, applicant vetting, interview scheduling, and post-adoption audits, with Read/Write access to the Adoption Module, Applicant Verification, and Follow-up Logs.

- Process adoption applications through the defined controlled pipeline.
- Verify applicant documents and identity as part of Phase 1.
- Conduct or record applicant interview and background-audit information.
- Coordinate and record physical or virtual home inspection activities.
- Apply the PRR's adoption exclusivity control when a dog's application reaches Home Inspection Approved.
- Support approval, digital adoption lease signing, dog handover, and certificate issuance.
- Maintain 30-, 90-, and 180-day post-adoption follow-up records.
- Maintain accurate records and protect sensitive applicant and animal information.

2. Role Responsibilities and Operational Boundaries

Responsibility	Operational expectation
Application processing	Move applications through the controlled adoption workflow and maintain accurate application records.
Applicant vetting	Perform the required document/identity verification and applicant screening activities defined by the PRR.
Interview scheduling	Schedule and record applicant interviews as part of the screening process.
Home inspection	Record physical or virtual home inspection activity and its outcome.
Adoption approval	Support the approval and digital lease phase after required screening stages are completed.
Handover and certificate	Support dog handover and certificate issuance after approval.
Post-adoption audits	Maintain follow-up records for 30, 90, and 180 days.

2.1 Authorized Adoption Functions

- Adoption Module
- Applicant Verification
- Follow-up Logs
- Applicant screening information
- Interview and home inspection records
- Adoption approval / lease workflow
- Dog handover and certificate workflow
- Post-adoption follow-up records

2.2 Boundary with Other Roles

Role	Primary interaction with Adoption Officer
Veterinarian	Provides the formal medical clearance required before a dog can be flagged as Adoptable on the public portal.
Shelter Manager	Maintains shelter housing, current location, intake, kennel, section, and capacity records for dogs in shelter care.
Foster Coordinator	Manages foster placements and foster-to-adopt transitions when applicable.
Rescue Centre Admin	Provides operational oversight, approvals, and escalation management within assigned locations/zones.

3. Adoption Workflow at a Glance

The PRR defines the following controlled sequence:

1. Application Submitted
2. Phase 1: Document & Identity Verification
3. Phase 2: Applicant Interview & Background Audit
4. Phase 3: Physical / Virtual Home Inspection
5. Phase 4: Approval & Digital Adoption Lease Signing
6. Phase 5: Dog Handover & Certificate Issuance
7. Phase 6: Post-Adoption Audit Logs (30 / 90 / 180 Days)

4. Step-by-Step Adoption Officer Procedures

4.1 Review a Submitted Adoption Application

Step 1 — Open the application record

Purpose: Begin processing from the submitted application.

- Review the applicant and dog information available in the application record.
- Confirm that the application is associated with the intended dog.
- Use the Adoption Module as the controlled record for the application.

Expected result: The correct application and dog are identified.

Step 2 — Check the dog's adoption status

Purpose: Ensure the application is being processed against an eligible adoption workflow state.

- Review the dog's current adoption-related status.
- Confirm that the dog has the required medical clearance before treating the dog as Adoptable on the public portal.
- If the dog is already locked by the exclusivity mechanism, do not proceed with a secondary application.

Expected result: The application is associated with a dog that is eligible for the relevant adoption stage.

4.2 Phase 1 — Document and Identity Verification

Step 1 — Review required applicant information

Purpose: Complete the first formal screening phase.

- Review the applicant's identity/document information captured by the Applicant Verification function.
- Verify the submitted information according to the organization's approved verification process.
- Record the verification outcome in the appropriate application record.

Expected result: The Phase 1 verification status is traceable.

Step 2 — Handle rejection or archive outcomes

Purpose: Keep unsuccessful applications controlled and traceable.

- If the application does not pass the verification stage, record the outcome through the supported rejection/archive workflow.

- Retain the required rationale or record information rather than silently deleting the application.

Expected result: The application has a clear documented outcome.

4.3 Phase 2 — Applicant Interview and Background Audit

Step 1 — Schedule the interview

Purpose: Move the applicant into the interview stage.

- Schedule the applicant interview using the adoption workflow.
- Record the relevant interview event and status.
- Keep the appointment associated with the correct applicant and application.

Expected result: The interview is scheduled and traceable.

Step 2 — Conduct and record the interview

Purpose: Capture the structured information required by the PRR.

- Record the interview information in the application workflow.
- Use the screening information defined by the PRR, including household and pet-care context where applicable.
- Do not invent additional scoring criteria that are not part of an approved PawGuard procedure.

Expected result: The interview/background-audit record is complete enough to support the next adoption stage.

4.4 Applicant Screening Matrix

The PRR specifies the following screening data areas:

Screening area	What the PRR requires
Residential ownership	Owned / Rented status.
Landlord approval	Landlord approval documentation where applicable.
Yard/fencing	Yard and fencing specifications.
Household	Household member counts.
Existing pets	Existing pet medical records.
Pet-care experience	Applicant's pet care experience.

Record accurately

The screening matrix is a data-capture requirement. This manual does not assign independent pass/fail thresholds or scores because the PRR does not specify those thresholds.

4.5 Phase 3 — Physical or Virtual Home Inspection

Step 1 — Arrange the inspection

Purpose: Complete the home suitability stage.

- Schedule the physical or virtual home inspection.
- Associate the inspection with the correct applicant and dog.
- Ensure the inspection event is recorded in the adoption workflow.

Expected result: The home inspection is scheduled and linked to the application.

Step 2 — Record the inspection outcome

Purpose: Create a traceable inspection record.

- Record the structured information gathered during the physical or virtual inspection.
- Use the applicant screening information required by the PRR as relevant to the inspection.
- Record the inspection outcome in the adoption workflow.

Expected result: The home inspection result is documented.

Step 3 — Apply the exclusivity rule

Purpose: Prevent double allocation of the dog.

- When the application reaches “Home Inspection Approved,” verify that the system applies the dog’s exclusivity lock.
- Do not attempt to advance a secondary application for the same dog.
- If the exclusivity control does not behave correctly, stop the workflow and report the defect through the approved testing/operational process.

Expected result: The approved application becomes exclusive for the dog according to the PRR.

4.6 Phase 4 — Approval and Digital Adoption Lease Signing

Step 1 — Confirm prerequisite stages

Purpose: Ensure approval occurs after the defined screening sequence.

- Confirm completion of document/identity verification.
- Confirm completion of interview/background audit.
- Confirm completion of physical/virtual home inspection.
- Confirm that the dog is eligible for adoption and has the required veterinary medical clearance.

Expected result: The application is ready for the approval phase.

Step 2 — Complete approval

Purpose: Record the approved adoption decision.

- Use the authorized adoption approval workflow.
- Ensure the approval is associated with the correct applicant and dog.
- Maintain the application record for auditability.

Expected result: The adoption application enters the approval stage.

Step 3 — Complete digital lease signing

Purpose: Generate/complete the required legal adoption documentation.

- Use the legal agreement workflow supported by the platform.
- The PRR specifies automated population of legal adoption contract agreements, liability waivers, and fee receipts upon approval.
- Do not alter legal wording outside the organization’s approved agreement process.

Expected result: The required adoption agreement documentation is recorded.

4.7 Phase 5 — Dog Handover and Certificate Issuance

Step 1 — Confirm handover readiness

Purpose: Ensure the approved adoption is ready to move to handover.

- Confirm that the application has completed the approval/lease phase.
- Confirm the dog associated with the application is the correct animal.
- Coordinate the physical handover with the relevant shelter/facility workflow.

Expected result: The dog is ready for the handover stage.

Step 2 — Record handover

Purpose: Complete the controlled handover event.

- Record the dog handover through the adoption workflow.
- Ensure the event is associated with the approved application.
- Maintain the animal's lifecycle history and adoption record.

Expected result: The handover is recorded.

Step 3 — Issue the adoption certificate

Purpose: Complete the documentation stage.

- Use the supported certificate issuance workflow.
- Ensure the certificate corresponds to the correct adopter and dog.

Expected result: Certificate issuance is recorded against the adoption.

4.8 Phase 6 — Post-Adoption Follow-Up Audits

Step 1 — Create/confirm follow-up schedule

Purpose: Prepare the required post-adoption audit cycle.

- The PRR requires follow-up checkpoints at 30, 90, and 180 days.
- Use the Follow-up Logs workflow to maintain these scheduled checks.
- Keep each follow-up associated with the completed adoption.

Expected result: The required 30/90/180-day follow-up sequence is traceable.

Step 2 — Record the 30-day follow-up

Purpose: Complete the first post-adoption audit.

- Record the follow-up activity in the Follow-up Logs.
- Capture the information and media proof supported by the workflow where applicable.
- Ensure the record identifies the correct adopted dog and adopter.

Expected result: The 30-day audit is recorded.

Step 3 — Record the 90-day follow-up

Purpose: Complete the second post-adoption audit.

- Record the follow-up activity.

- Maintain any applicable photo/video proof through the supported process.

Expected result: The 90-day audit is recorded.

Step 4 — Record the 180-day follow-up

Purpose: Complete the final PRR-defined follow-up checkpoint.

- Record the follow-up activity.
- Maintain the adoption audit trail and associated proof where applicable.

Expected result: The 180-day audit is recorded.

5. Veterinary Medical Clearance Dependency

The PRR requires a formal digital adoption medical clearance from a licensed veterinarian before any dog can be flagged as “Adoptable” on the public portal.

- The Adoption Officer should verify the dog's adoption eligibility includes the required veterinary clearance.
- The Adoption Officer does not replace or independently issue the veterinary medical clearance.
- Clinical examinations, treatment, prescriptions, and health clearances are handled through the authorized veterinary workflow.
- If the required medical clearance is missing, do not treat the dog as fully eligible for public adoption listing.

6. Coordination with Shelter and Foster Operations

6.1 Shelter Coordination

- Confirm the dog's current shelter/facility information when preparing for handover.
- Coordinate physical availability and movement with the Shelter Manager.
- Avoid relying on stale location information; the Dog Master Profile is the system's single source of truth for admitted animals.

6.2 Foster-to-Adopt Coordination

- The PRR supports a foster-to-adopt transition that converts an active foster placement directly into permanent adoption.
- When such a transition occurs, use the supported workflow rather than recreating the applicant and dog information manually.
- The legal lease generation requirement still applies.

7. Adoption Records and Reporting

- Maintain complete application-stage records so the adoption process is auditable.
- Maintain interview, background-audit, and home-inspection records.
- Maintain approval, lease, handover, and certificate records.
- Maintain 30/90/180-day follow-up logs.
- The PRR's reporting engine supports an Adoption Pipeline Analysis covering application conversion rates, processing time per stage, rejection rationale distributions, and post-adoption check-in compliance.

8. Adoption Officer Scenario Guide

Scenario	Action sequence
New application	Open application → verify dog/applicant → Phase 1 verification → Phase 2 interview/background → Phase 3 home inspection → Phase 4 approval/lease → Phase 5 handover/certificate → Phase 6 follow-ups.
Applicant fails verification	Record the appropriate rejection/archive outcome and retain the application history.
Dog reaches Home Inspection Approved	Verify exclusivity lock → do not process secondary applications for that dog.
Dog lacks veterinary clearance	Do not treat the dog as Adoptable; coordinate with the authorized veterinary workflow.
Approved adoption ready for handover	Confirm approval/lease → coordinate with shelter/facility → record handover → issue certificate.
Completed adoption	Maintain 30-, 90-, and 180-day follow-up records.
Foster-to-adopt	Use the supported transition workflow to avoid duplicate data entry while completing the legal adoption process.

9. Security, Privacy, and Audit Responsibilities

- Use only the Adoption Officer/Adoption Coordinator account and authorized adoption functions.
- Do not access records outside the role's authorized operational boundary.
- Applicant identity, household information, landlord documents, existing pet medical records, and legal adoption data are sensitive operational information.
- The platform must enforce server-side RBAC for every request.
- Critical transactions must be auditable with User ID, Timestamp, IP Address, Action Code, and Pre/Post State Data.
- Do not bypass adoption workflow controls or modify the database directly.
- Do not attempt to circumvent the dog exclusivity lock.
- Follow platform session, password, and applicable multi-factor authentication controls.

10. Troubleshooting and Escalation Guidance

Issue	Immediate response
Application is linked to wrong dog	Stop processing and verify the application and Dog Master Profile before continuing.
Applicant verification data is incomplete	Do not assume missing information. Complete the required verification record through the authorized workflow.
Interview/home inspection record is missing	Do not advance the application as though the stage were completed; restore the required record through the supported workflow.
Dog is locked for another application	Do not create or advance a secondary application. Follow the organization's approved exception/escalation process if applicable.
Dog appears Adoptable without veterinary clearance	Stop the adoption workflow and coordinate with the authorized veterinary function; report any system inconsistency.
Lease/certificate information is incorrect	Do not improvise legal changes. Use the approved agreement/certificate workflow and escalate document defects.
Follow-up date or record is missing	Check the Follow-up Logs and restore the required 30/90/180-day record through the supported workflow.
Unauthorized action is available	Do not use it. Verify RBAC and report the access-control issue.

11. Adoption Officer Daily Operational Checklist

1. Review newly submitted adoption applications.
2. Process pending document and identity verification.
3. Review scheduled interviews and complete required interview records.
4. Review pending background-audit information.
5. Review scheduled physical/virtual home inspections.
6. Verify Home Inspection Approved applications have the required exclusivity behavior.
7. Check that dogs being processed have the required veterinary medical clearance.
8. Progress eligible applications through approval and digital lease signing.
9. Coordinate and record dog handovers and certificate issuance.
10. Review upcoming 30-, 90-, and 180-day follow-ups.
11. Complete due follow-up audit records and applicable proof uploads.
12. Review exceptions, incomplete records, and workflow inconsistencies.

12. PRR Requirement Traceability

PRR Section	Requirement area	Covered in this manual
2.1	Adoption Coordinator responsibilities and access	Sections 1–2
3.4	Dog Master Profile / lifecycle history	Sections 4.1, 6, 8, 13
3.5	Veterinary adoption medical clearance	Section 5 and UAT
3.7	Controlled adoption workflow	Sections 3–4
3.7	Exclusivity lock	Sections 3, 4.5, 8, 9, 13
3.7	Applicant screening matrix	Section 4.4
3.7	Interview and home inspection logging	Sections 4.3–4.5
3.7	Legal agreement generation	Section 4.6
3.7	Post-adoption 30/90/180 follow-ups	Section 4.8
4.1	Adoption Pipeline Analysis	Section 7
6.1	RBAC, audit, privacy, session governance	Section 10
7.1	Role guide deliverable	Entire manual
7.2	End-to-end validation and zero exclusivity violation	Section 13

13. Interface and Usability Expectations

- Use high-contrast data grids, explicit status badges, and clear workflow states as specified by the PRR.
- Adoption records should make the current application stage and relevant action state easy to identify.
- Sensitive applicant information should be presented only to authorized users and according to privacy controls.
- The PRR requires page loads under 2 seconds across standard web/mobile connections and real-time operational dashboard updates as a final acceptance benchmark.
- This manual does not prescribe exact screen names or button labels where the PRR does not define them.

14. Operational Handover Notes

- Confirm Adoption Officer/Coordinator account provisioning and RBAC.
- Confirm the Adoption Module, Applicant Verification, and Follow-up Logs are available.
- Validate the full application-to-follow-up workflow in the deployed environment.
- Test the exclusivity lock specifically at Home Inspection Approved.

- Verify that veterinary medical clearance gates Adoptable status.
- Verify legal agreement, handover, certificate, and follow-up records.
- Run the UAT checklist in Section 13.
- Record defects through the approved testing/change process.

Appendix A — Quick Reference

Operational need	Remember
Application	Process through verification → interview/background → home inspection → approval/lease → handover/certificate → follow-up.
Screening	Capture the PRR-defined residential, landlord, fencing, household, existing-pet, and pet-care information.
Exclusivity	Home Inspection Approved must lock the dog against secondary applications.
Medical clearance	Licensed veterinarian authorization is required before Adoptable public status.
Handover	Record approved handover and certificate issuance.
Follow-up	Maintain 30-, 90-, and 180-day audit logs.
Foster-to-adopt	Use the supported transition workflow rather than duplicate data entry.
Security	Use authorized functions; do not bypass RBAC, audit, or exclusivity controls.

End of Controlled Document
