

PAWGUARD

USER OPERATIONS MANUAL

Veterinarian — Step-by-Step Role Guide

Document Control	Value
Document Reference	UOM-PAWGUARD-VET-2026-V1
Requirements Baseline	PRR-PAWGUARD-2026-V1
PRR Issue Date	July 27, 2026
Project	PawGuard Dog Rescue, Shelter Operations & Adoption Management Web Application
Role	Veterinarian
Primary Scope	Clinical examinations, surgeries, prescriptions, medical clearances, adoption fitness checks
Authorized Modules	Medical Module, Isolation Registers, Health Clearances
Document Purpose	Operational step-by-step guidance for veterinary users

1. Veterinarian Role Overview

The Veterinarian is responsible for clinical examinations, surgeries, prescriptions, medical clearances, and adoption fitness checks. The PRR grants the Veterinarian read/write access to the Medical Module, Isolation Registers, and Health Clearances.

Area	PRR Requirement
Clinical care	Clinical examinations and triage diagnosis
Surgical care	Treatment and surgical procedure records
Preventative care	Vaccination, deworming, and flea/tick prevention tracking
Medication	Prescription and medication administration records
Medical clearance	Formal veterinarian authorization before a dog can be flagged Adoptable
Adoption fitness	Clinical assessment supporting adoption readiness

2. Operating Principles for Veterinary Users

- Work from the correct Dog Master Profile and verify the animal identity before entering a clinical event.
- Maintain the medical record as part of the dog's permanent, audit-ready lifecycle history.
- Record clinical information at the point of care using the structured medical workflow.
- Do not grant adoption medical clearance unless the required clinical assessment has been completed.
- Use the authorized Medical Module, Isolation Registers, and Health Clearances within the Veterinarian role boundary.
- Ensure medical events, treatment, medication, and clearance records are linked to the correct dog.

3. Veterinary Workflow at a Glance

Stage	Veterinarian Action	Expected Record
1. Identify patient	Open and verify the admitted dog's Dog Master Profile.	Correct dog identified
2. Clinical intake	Perform structured clinical intake examination.	Clinical examination
3. Treatment	Record treatment and clinical interventions.	Treatment event
4. Surgery	Record procedure, anesthesia, recovery, and veterinarian identity where applicable.	Surgical record
5. Preventative care	Record vaccinations and preventative treatments.	Preventative-care record
6. Medication	Record drug schedule and administration information.	Prescription/medication record
7. Isolation	Maintain applicable isolation-register information.	Isolation record
8. Adoption fitness	Assess clinical readiness for adoption.	Fitness assessment
9. Clearance	Issue formal medical clearance when eligible.	Health clearance
10. Adoption readiness	Verify Adoptable status is based on veterinarian authorization.	Authorized adoption readiness

4. Step-by-Step Procedures

4.1 Verify the Dog Before Clinical Work

Purpose: Prevent clinical information from being recorded against the wrong animal.

1. Open the admitted dog's Dog Master Profile.
2. Confirm the unique Dog Registration Number.
3. Confirm the linked Rescue Case Number.
4. Confirm the Microchip ID when available.
5. Review the dog's identifying photo/visual attributes and current location.
6. Confirm that the clinical event you are about to record belongs to this dog.
7. Proceed to the Medical Module only after the patient identity is verified.

- The correct dog is selected.
- The rescue case and identifying information are consistent.
- The medical event will be attached to the correct Dog Master Profile.

4.2 Perform the Clinical Intake Examination

Purpose: Create the structured clinical intake record for an admitted dog.

8. Open the dog's clinical intake examination.
9. Record the Body Condition Score using the PRR's 1–9 scale.
10. Record dental health observations.
11. Record ocular observations.
12. Record aural observations.
13. Record coat condition.
14. Record visible injuries.
15. Record the initial triage diagnosis.
16. Save the examination record.
17. Verify that the completed examination is associated with the correct Dog Master Profile.

4.3 Manage Clinical Treatment

Purpose: Maintain a detailed record of medical treatment provided to the dog.

18. Open the dog's medical record.
 19. Review the current clinical history before recording a new treatment.
 20. Record the treatment or clinical procedure performed.
 21. Include the information required by the available structured medical workflow.
 22. Save the treatment event.
 23. Verify that the treatment appears in the dog's medical history/activity timeline.
- Treatment is linked to the correct patient.
 - The event is saved successfully.
 - The clinical history remains chronologically traceable.

4.4 Record Surgical Procedures

Purpose: Record surgical care and associated clinical details.

24. Open the dog's medical/surgical record.
25. Select the supported surgical procedure workflow.
26. Record the type of surgery, such as sterilization, orthopedic, or soft-tissue surgery where applicable.
27. Record anesthesia information.
28. Record post-operative recovery notes.
29. Record the attending veterinarian identity.
30. Save the surgical record.
31. Review the saved event for completeness and correct patient linkage.

PRR Surgical Record Element	What to Record
Procedure	Surgical procedure performed
Procedure category	Sterilization, orthopedic, soft tissue, or applicable supported category
Anesthesia	Anesthesia information
Recovery	Post-operative recovery notes
Clinician	Attending veterinarian identity

4.5 Track Preventative Care

Purpose: Keep preventative-care records current and support scheduled renewal reminders.

32. Open the dog's preventative-care record.
33. Review existing vaccination and preventative-care history.
34. Record core vaccinations when administered, including DHPP and Rabies where applicable.
35. Record deworming treatments where applicable.
36. Record flea/tick preventative applications where applicable.
37. Save the preventative-care event.
38. Review the next scheduled renewal/reminder information provided by the platform.
 - Vaccination and preventative-care events are linked to the correct dog.
 - Dates and applicable treatment information are complete.
 - Upcoming renewal requirements remain visible to authorized users.

4.6 Record Prescriptions and Medication Administration

Purpose: Maintain structured medication schedules and administration records.

39. Open the dog's prescription/medication record.
40. Review currently active medications before adding a new medication.
41. Record the medication/drug information.
42. Enter the dosage.
43. Enter the administration route.
44. Enter the start date.
45. Enter the end date.
46. Record the active medication schedule.
47. Save the prescription/medication record.
48. Complete daily administration or nurse sign-off information where required by the workflow.
49. Review the medication record for accuracy and correct patient linkage.

PRR Medication Element	Required Record
Drug schedule	Active medication schedule
Dosage	Prescribed dosage
Route	Administration route
Start date	Medication start date
End date	Medication end date
Administration	Daily administration / nurse sign-off register where applicable

4.7 Manage Isolation Register Information

Purpose: Maintain isolation-related records within the Veterinarian's authorized Isolation Register access.

50. Open the Isolation Register for the applicable dog.
51. Verify the dog identity before updating the record.
52. Review the existing isolation information and relevant clinical history.
53. Record the applicable isolation-related clinical information supported by the workflow.
54. Save the update.
55. Verify that the dog's current isolation status and history remain traceable.

4.8 Perform an Adoption Fitness Check

Purpose: Determine whether the dog's clinical state supports formal adoption medical clearance.

56. Open the dog's current medical history.
57. Review clinical intake findings.
58. Review treatment and surgical history.
59. Review preventative-care status.
60. Review active and completed medication records.
61. Assess the dog's current clinical readiness for adoption using the authorized veterinary workflow.

62. Record the adoption fitness assessment.
63. Confirm that the assessment is attached to the correct Dog Master Profile.
 - Required clinical information has been reviewed.
 - The fitness assessment is recorded by the authorized Veterinarian.
 - The record clearly reflects the current clinical decision.

4.9 Issue Formal Adoption Medical Clearance

Purpose: Provide the formal veterinary authorization required before a dog can be flagged as Adoptable on the public portal.

64. Open the Health Clearances workflow.
65. Select the correct Dog Master Profile.
66. Review the complete clinical information relevant to adoption readiness.
67. Confirm that the required clinical examination and treatment information is available.
68. Complete the formal adoption medical-clearance action when the dog is clinically eligible.
69. Save the clearance.
70. Verify that the clearance is recorded under the authorized veterinarian's identity.
71. Verify that the system permits Adoptable status only after the required veterinarian authorization.

5. Medical Record Quality Checklist

Check	Expected Result
Patient identity	Dog Registration Number / linked identifiers match the patient
Clinical intake	Body condition, dental, ocular/aural, coat, injuries, and triage diagnosis recorded
Treatment	Treatment events are recorded and linked to the dog
Surgery	Procedure, anesthesia, recovery, and attending veterinarian recorded when applicable
Preventative care	DHPP/Rabies, deworming, and flea/tick events recorded when applicable
Medication	Schedule, dosage, route, start/end dates and administration records are complete when applicable
Isolation	Isolation information is maintained in the authorized register
Adoption fitness	Fitness assessment recorded before medical clearance
Health clearance	Formal veterinarian authorization recorded before Adoptable status
History	Medical events remain traceable in the dog's lifecycle history

6. Interaction with Other Operational Roles

The Veterinarian operates within a role-based workflow. The PRR assigns other operational responsibilities to Shelter Managers, Adoption Coordinators, Foster Coordinators, Rescue Agents, and other roles. The veterinarian should complete the clinical actions assigned to the Veterinarian role and hand off to the next operational role through the system.

Role	Relevant Handoff / Relationship
Rescue Agent	Completes field rescue and transport; shelter admission follows transport.
Shelter Manager	Manages intake, facility placement, kennel allocation, and daily shelter care.
Veterinarian	Performs clinical examination, treatment, surgery, medication, and medical clearance.
Adoption Coordinator	Processes applicant vetting, interviews, home inspection, approval, handover, and follow-ups after medical eligibility is established.
Foster Coordinator	Manages foster qualification, placement, and foster-home supply allocation.

7. End-to-End Medical Readiness Workflow

72. A rescue case reaches ADMITTED after the animal is received at the designated shelter.
73. The Shelter Manager completes the shelter intake and location process.

74. The Veterinarian opens the Dog Master Profile and performs the clinical intake examination.
75. The Veterinarian records treatment, surgery, preventative care, and medication as required.
76. The Veterinarian maintains relevant isolation information where applicable.
77. The Veterinarian performs the adoption fitness assessment when the dog's care stage makes adoption evaluation appropriate.
78. The Veterinarian issues formal medical clearance when the dog is clinically eligible.
79. The Adoption Coordinator can then proceed through the controlled adoption workflow.

WORKFLOW CONTROL

The PRR makes veterinarian authorization a prerequisite for a dog to be flagged as Adoptable. Adoption processing remains a separate controlled workflow managed by the Adoption Coordinator.

8. Security, Privacy and Audit Responsibilities

- Use only the authenticated Veterinarian account assigned to you.
- Do not access or modify information outside your authorized role permissions.
- Critical system transactions are expected to be audit logged.
- Audit records must capture User ID, Timestamp, IP Address, Action Code, and Pre/Post State Data.
- Protect sensitive patient and operational information and follow the platform's access controls.
- Use safe document uploads only. The PRR specifies JPEG, PNG, PDF, and MP4 as permitted file types subject to signature, MIME-type, and size validation.
- Follow session governance, including enforced inactivity timeout, secure password rules, and applicable authentication controls.

RBAC REQUIREMENT

The PRR requires strict server-side RBAC and states that no user may view or modify data outside their authorized role permissions.

9. Mobile, Usability and Accessibility Guidance

- Use responsive interfaces when working from supported mobile/tablet devices.
- Field-facing forms and operational controls are expected to support easy touch interaction.
- High-contrast data grids, explicit status badges, zebra striping, and sticky headers are part of the PRR usability standard.
- Use clear clinical status information and verify the selected patient before committing a record.

10. Troubleshooting and Escalation

Situation	Veterinarian Action	Operational Follow-up
Wrong dog selected	Stop entry and return to patient identification.	Correct the Dog Master Profile before recording care.
Clinical information missing	Review the medical record and complete required information where authorized.	Escalate to the appropriate operational role if the missing data belongs elsewhere.
Medical treatment required	Record the treatment in the Medical Module.	Continue clinical monitoring according to the supported workflow.
Medication information incomplete	Do not finalize an incomplete prescription record.	Complete dosage, route, schedule, and dates as applicable.
Isolation information required	Use the authorized Isolation Register.	Maintain traceable isolation information.
Dog not medically ready for adoption	Record the clinical assessment/status.	Do not issue adoption medical clearance until eligibility is established.
Adoption-ready dog lacks clearance	Review Health Clearances.	Complete formal clearance only when clinically eligible.

Situation	Veterinarian Action	Operational Follow-up
Permission/access issue	Do not bypass RBAC.	Escalate to an authorized administrator.

11. Veterinary UAT / Role Readiness Checklist

Test Area	Pass Condition
Role access	Veterinarian can access Medical Module, Isolation Registers, and Health Clearances.
Patient identification	Clinical record can be tied to the correct Dog Master Profile.
Clinical intake	All PRR-defined intake fields can be recorded.
Treatment	Treatment events can be created and traced.
Surgery	Surgical records capture PRR-defined information.
Preventative care	Vaccination and preventative treatments can be recorded.
Medication	Medication schedules and administration records can be maintained.
Isolation	Isolation records can be read/updated within role permissions.
Fitness assessment	Adoption fitness assessment can be recorded.
Medical clearance	Formal veterinarian clearance can be recorded.
Adoptable control	Dog cannot be flagged Adoptable without required veterinarian authorization.
Auditability	Critical actions are traceable through audit logging.
RBAC	Veterinarian cannot access higher-tier functions outside role permissions.
Responsive use	Supported interfaces operate across mobile/tablet/desktop as required.

12. PRR Requirement Traceability

PRR Requirement	Manual Section
Veterinarian responsibilities: clinical examinations, surgeries, prescriptions, medical clearances, adoption fitness checks	Sections 1, 4.2–4.9
Read/write Medical Module	Sections 1, 4.2–4.6
Read/write Isolation Registers	Section 4.7
Read/write Health Clearances	Section 4.9
Clinical intake: body condition score, dental, ocular/aural, coat, injuries, triage diagnosis	Section 4.2
Treatment and surgical logging	Sections 4.3–4.4
Preventative care: DHPP, Rabies, deworming, flea/tick prevention	Section 4.5
Prescription/medication: schedule, dosage, route, dates, sign-off	Section 4.6
Veterinarian authorization before Adoptable status	Section 4.9
Dog Master as single source of truth and immutable activity history	Sections 2 and 3
RBAC and audit controls	Section 8
Mobile/accessibility requirements	Section 9
Final RBAC and end-to-end acceptance considerations	Section 11

13. Source and Change Control

This manual is based on Project Requirement Report PRR-PAWGUARD-2026-V1, issued July 27, 2026, by the PawGuard Rescue & Adoption Operations Committee.

The PRR states that it represents the official functional scope and business expectations of PawGuard.
